Electroimpact and Boeing - Working Together on 777x

Electroimpact celebrates Boeing's decision to build the 777x aircraft and its wings in Washington State.

We are excited to be a part of this program and wish Boeing success.

Electroimpact is very pleased to announce our partnership with Boeing on this program. Electroimpact and Boeing have entered into a contract to provide the tooling and equipment for the wingbox assembly in Everett, WA. Boeing's investment in this project combined with the Composite Wing Center represent the first commercial composite wingbox manufacturing system in North America.

These world-class projects reflect a commitment by both companies to aerospace excellence.

We look forward to continuing to work together.
